PROFESSIONAL SUMMARY

Senior Cybersecurity Engineer with 4+ years securing multi-cloud environments (AWS, Azure, GCP). Expertise in SIEM/SOAR architecture, IAM controls, and DevSecOps. Delivered 45% faster incident response, 40% reduction in privileged access risk, and 30% fewer production vulnerabilities.

EDUCATION

Gannon University
Master of Science, *Information Assurance and Cybersecurity*

SKILLS

Cybersecurity & Security Operations: Security Engineering, Incident Response, Threat Hunting, Threat Intelligence, Security Operations Center (SOC), SOAR
SIEM, EDR & Endpoint Security: Splunk Enterprise Security, Microsoft Sentinel, IBM QRadar, CrowdStrike Falcon, SentinelOne, Cortex XDR, Cortex XSOAR, UEBA
Network Security & IAM: IAM, CyberArk, Microsoft Entra ID (Azure AD), MFA, RBAC, Conditional Access, Zero Trust Security
Cloud Security & Infrastructure Security: AWS, Microsoft Azure, Google Cloud Platform (GCP), AWS Security Hub, GuardDuty, CloudTrail, Microsoft Defender for Cloud, Docker, OPA, Falco
Vulnerability Management & Security Testing: Vulnerability Assessment, Penetration Testing, Nessus, Qualys, Rapid7 InsightVM, Burp Suite Pro, Metasploit, Open VAS, Nmap
Application Security & DevSecOps: DevSecOps, Secure SDLC, Checkmarx, Veracode, Kubernetes, CI/CD Security, Semgrep, SonarQube, Jenkins
Programming & Security Automation: Python, PowerShell, Security Automation, API Integrations, Terraform
Incident Response & Forensics: Incident Response, Root Cause Analysis, Threat Investigation, MITRE ATT&CK, Alert Triage
Governance, Risk & Compliance (GRC): NIST CSF, ISO 27001, PCI-DSS, HIPAA, SOC 2, CIS Controls

WORK EXPERIENCE

BOK Financial Corporation | Senior Cybersecurity Engineer Feb 2026 - Present

- Improved cloud security visibility of critical financial assets by 35% through multi-cloud monitoring architecture across AWS, Azure, and GCP.
- Reduced privileged access risks by 40% by architecting IAM controls including MFA, RBAC, and Conditional Access policies across banking applications.
- Reduced incident response times by 45% by engineering automated detection and response workflows in SIEM and SOAR platforms.
- Increased endpoint threat detection coverage to 4,000+ enterprise endpoints, improving visibility across Windows, macOS, and Linux environments.
- Achieved 95% critical vulnerability remediation rate within SLA targets by directing enterprise-wide vulnerability management programs.
- Reduced production security findings by 30% by implementing DevSecOps controls across CI/CD pipelines and container environments.
- Prevented high-risk vulnerabilities from reaching production through penetration testing and security assessments with application and infrastructure teams.
- Eliminated 20+ hours of monthly manual effort by automating compliance monitoring and security reporting through scripting and API integrations.

Banner Health | Cybersecurity Engineer Feb 2025 - Dec 2025

- Reduced alert investigation time by 30% by managing Security Operations Center (SOC) monitoring across healthcare environments.
- Identified multiple suspicious activities before operational impact through proactive threat hunting using ATT&CK framework and behavioral analytics.
- Reduced false-positive alerts by 25%, improving analyst efficiency and SOC alert fatigue across endpoint detection platforms.
- Improved multi-cloud security compliance by securing healthcare workloads across AWS, Azure, and GCP infrastructure.
- Drove remediation of 150+ critical vulnerabilities through comprehensive vulnerability assessments and penetration testing.
- Decreased incident containment time by 35% through coordinated incident response with IT, network, and compliance teams.
- Reduced pre-production vulnerabilities by integrating application security controls into DevSecOps pipelines and testing frameworks.
- Strengthened threat detection coverage by correlating SIEM, EDR, and threat intelligence data across clinical systems.

Cognizant | Information Security Engineer Jan 2021 - Nov 2023

- Reduced critical security exposures by 40% across business applications through enterprise vulnerability management programs.
- Improved application security compliance by establishing secure SDLC practices with automated security testing integrations.
- Reduced repetitive manual tasks by 25% through Python and PowerShell automation across security operations.
- Strengthened protection of sensitive organizational data by hardening cloud and SaaS environments with IAM, MFA, DLP, and Zero Trust controls.
- Supported successful internal and external audits by partnering with teams to perform security assessments and risk reviews.
- Accelerated incident triage and investigation processes by integrating SIEM and SOAR workflows and automation.

PROJECTS

Cloud Security Posture Management & Compliance Automation

- Developed a cloud security framework using AWS Security Hub, GuardDuty, CloudTrail, and Microsoft Defender for Cloud, improving visibility into multi-cloud security risks.
- Automated compliance validation workflows using Terraform and Python scripts to identify policy violations and generate audit-ready reports, reducing manual review efforts and accelerating remediation activities.
- Integrated cloud security telemetry into Splunk dashboards to improve threat monitoring and risk tracking, helping security teams prioritize critical exposures and strengthen regulatory compliance.

Healthcare Threat Detection & Incident Response Platform

- Built a threat detection platform by correlating Microsoft Sentinel logs with CrowdStrike Falcon and SentinelOne telemetry, improving visibility into suspicious activities across healthcare systems.
- Designed detection rules and KQL-based analytics aligned with MITRE ATT&CK techniques to identify credential misuse, lateral movement, and endpoint-based threats with greater accuracy.
- Implemented SOAR-driven response workflows to automate alert enrichment and containment actions, reducing investigation effort and improving incident response efficiency for security analysts.

DevSecOps Vulnerability Management Framework

- Created a DevSecOps vulnerability management framework by integrating Checkmarx, Veracode, and Qualys scans into Jenkins pipelines, enabling early identification of application and infrastructure security risks.
- Established container security validation processes for Docker and Kubernetes workloads, improving visibility into vulnerable components before production deployment.
- Automated vulnerability prioritization and reporting through Python-based workflows, helping development and security teams remediate critical findings faster and improve release quality.

CERTIFICATIONS & ACHIEVEMENTS

- CompTIA Security+ (SY0-701) - CompTIA
- IBM Cybersecurity Analyst Professional Certificate - Coursera
- Google Cybersecurity Professional Certificate - Coursera
- Microsoft Cybersecurity Analyst Professional Certificate - Coursera
- IBM IT Support and Cybersecurity Specialist Professional Certificate - Coursera
- Microsoft Security Operations Analyst Professional Certificate - Coursera
